Carbide Burrs

CATALOG (SKU) NUMBER: DR-BURR

DrillCo's Double Cut, with it's chisel type cutting edge, is a machine ground tool built to exacting tolerances of place-concentration, size & shape. Accuracy Combined with precision grinders results in smooth running, fast metal removal & fine finishes. Right and left hand helical flutes combined to produce an chisel type cutting tooth. This results in faster penetration & stock removal with minimal bounce or chatter. Double Cut design also produces an easy to handle granular type chip, in most metals, as opposed to the conventional sliver type chips. Throughout its life, the Double Cut gives faster stock removal, less operator fatigue, and maintains a good finish on the widest possible variety of materials.

Carbide burs are one of the most widely used and versatile cutting tools, used in virtually every industry. Manufactured from Tungsten Carbide, they are primarily used to remove burrs (the small flakes of metal) that often remain on the workpiece after the machining process. Burs are available in standard lengths, long series (for hard to reach applications), and in miniature sizes (for use in pencil grinders).
